

JASON VANDEVENTER

Platform Engineer | DevSecOps | Active Secret Clearance

Tulsa, OK | 918-500-6414 | jason@vanfreckle.com | vanfreckle.com | github.com/jasonvandeventer

Cleared platform engineer with 14 years in IT operations and systems engineering, specializing in DevSecOps and platform engineering in DoD environments. Professional experience across Department of the Army and Department of the Air Force programs in AWS GovCloud, performing STIG compliance assessments, ACAS vulnerability scanning, and CUI handling in IL-4 and IL-5 environments. Independently owns and operates a live Kubernetes (Talos) platform with ArgoCD GitOps, a full CI/CD release pipeline with migration safety gates, and verified backup/restore, serving real users in production.

CERTIFICATIONS

CompTIA SecurityX (May 2023) | **AWS Solutions Architect Associate** (Jul 2025) | **CompTIA Security+** (Mar 2023) | **CompTIA A+** (2005)

TECHNICAL SKILLS

Platforms: Kubernetes (Talos, k0s, k3s), ArgoCD, GitOps, AWS GovCloud, EC2, EBS, CloudFormation

CI/CD & Automation: GitHub Actions, GitLab CI/CD, Bash, Python, Alembic, Image Updater

Security & Compliance: STIG Viewer, ACAS, RHEL hardening, NIST 800-63B, CUI handling, Cloudflare Access

Data: PostgreSQL (CNPg), SQL Server, WAL archiving, R2 object storage, verified backup/restore

Infrastructure: RHEL 9, Linux administration, NFS, Longhorn, Tailscale, DNS, TLS, Active Directory

Observability: Splunk, log analysis, monitoring, post-deploy verification

PROFESSIONAL EXPERIENCE

DevSecOps Engineer

Oct 2025 - Present

HumanIT Solutions (DAF Program)

Remote

- Engineer AWS GovCloud infrastructure using CloudFormation to provision multi-node RHEL environments for containerized workloads on a Department of the Air Force program
- Prepare Linux systems for Kubernetes (k0s) deployment, including networking, storage configuration, and system hardening to applicable STIG requirements
- Conduct RHEL 9 STIG compliance assessments using STIG Viewer; document findings and exceptions for security review
- Execute ACAS vulnerability scans supporting application plugin validation on Appian instances
- Operate in DoD IL-4 and IL-5 environments on NIPR, handling and marking Controlled Unclassified Information
- Troubleshoot infrastructure and system-level issues across Linux and Windows environments in production, including STIG remediation via volume manipulation in AWS GovCloud

DevOps Engineer

Nov 2022 - Jun 2025

Clarity (Department of the Army Program)

Remote

Position eliminated due to program funding reductions.

- Managed and optimized GitLab CI/CD pipelines supporting secure application delivery in a classified DoD contractor environment operating under active ATO
- Administered AWS GovCloud IAM roles, policies, and user access controls in compliance with federal security standards and NIST 800-53 governance
- Developed automation scripts using Bash and GitLab APIs to improve pipeline monitoring, reporting, and operational visibility
- Provisioned and managed user access across cloud and development platforms, supporting secure onboarding and access lifecycle management
- Supported infrastructure and platform changes within a regulated environment adhering to strict security and change management processes
- Earned CompTIA Security+ and SecurityX certifications within six months of starting, exceeding DoD 8140 IAT Level II baseline requirements

Career Development

Jun 2025 - Oct 2025

Independent

Tulsa, OK

- Built an enterprise SIEM laboratory using Splunk Enterprise with structured technical mentorship; analyzed 30,000+ security events and attack patterns in real network traffic

- Earned AWS Solutions Architect Associate certification

IT Support Specialist

Jul 2021 - Oct 2021

L3Harris Technologies (Contract)

Tulsa, OK

- Provided technical support for classified development infrastructure in a secure DoD facility; managed Active Directory organizational units and user provisioning for engineering teams

AV / Simulation Technician

Jul 2017 - Feb 2021

Ascension St. John Hospital System

Tulsa, OK

- Managed audiovisual systems and teleconferencing for executive and department meetings across the hospital system
- Configured, programmed, and operated high-fidelity medical simulation equipment for the nursing education department, supporting clinical training curricula

Technical Support Representative

Dec 2014 - Jul 2016

Open Options

Addison, TX

- Provided Tier 2 support for physical access control systems (PACS); installed SQL Server backends, debugged system issues, and assisted end users and dealers with hardware configuration

Onsite Field Technician

Sep 2012 - Nov 2014

NCR Corporation

Dallas-Fort Worth

- Provided onsite and remote technical support for POS hardware installations; replaced and repaired motherboards, storage, peripherals, and specialized equipment including cash dispensers and coin recyclers

PLATFORM ENGINEERING (PERSONAL PROJECTS)

Self-owned infrastructure and applications serving real users. Clearly distinguished from employer work above.

Cartarch | github.com/jasonvandeventer/cartarch

Full-stack MTG collection and deck management platform (FastAPI/PostgreSQL) running in production on Kubernetes with real users since v1.

- Designed and operate a full CI/CD release pipeline: tag, build, publish, ArgoCD Image Updater promotion, PreSync Alembic migration hooks, additive migrate-before-deploy discipline, and post-deploy verify/soak job
- 900+ automated tests with CI release-record guard preventing unverified deployments
- Implemented CloudNativePG (CNPg) PostgreSQL with WAL archiving to R2 object storage; completed full restore drills verifying backup chain integrity
- Built OAuth-gated service exposure behind Cloudflare Access with timing-oracle-resistant auth flows aligned to NIST SP 800-63B
- Self-hosted image mirror (525,000+ card images) with daily automated price data ingest
- Root-caused and structurally prevented a production availability incident (synchronous I/O blocking async handler under single-writer DB transaction); documented in published postmortem

Kubernetes Platform (Talos) | github.com/jasonvandeventer/vanfreckle-platform

- Own and operate a multi-node Talos Kubernetes cluster with ArgoCD GitOps managing 10+ applications (all Synced/Healthy)
- Executed a blue/green cluster migration from k3s to Talos with simultaneous SQLite-to-PostgreSQL data migration, zero data loss, and minimal planned downtime
- Longhorn distributed storage on enterprise SSDs; Cloudflare DNS and TLS termination; Tailscale mesh networking
- Deployed Vaultwarden, Obsidian MCP server, and Cartarch MCP server with Cloudflare Access and Managed OAuth

EDUCATION

Associate of Science, Enterprise Development

Tulsa Community College
